## STROMOHAB INTERNAL MEMO

---

---

**DATE:** 03/11/2008  
**TO:** PHIL JEPSON, M ZHAO  
**CC:** ADAR PELAH  
**FROM:** MAT GILBERT  
**RE:** **UPDATE:** ACCESSING STROMOHAB SERVER REPOSITORY NETWORK SHARE

---

Due to the unreliability of the Ethernet controller in appc01, the Subversion repository has been moved to an online network share. Details on accessing the share have been circulated by Terry Edhouse, and a copy of the email is posted in the repository. Access to the new repository is as described in the previous memo – the only difference is the repository path.

The downside with hosting a repository on a network share is that there is no control over access to the repository directory. For this reason it is important that no modifications are made directly to any files in [/SharedAreas/STROMOHAB/SvnRepository\\_Stromohab](#), as changes to any of these configuration files may corrupt the repository. Access to the directory should be via an SVN client such as TortoiseSVN, again as detailed in the previous memo.

*Details of Subversion Repository on Network Share:*

User logins created: mag501 pj10 mz503

User passwords: All passwords are “stromohab” without the “”

Repository URL: [file:///S:/SharedAreas/STROMOHAB/SvnRepository\\_Stromohab](file:///S:/SharedAreas/STROMOHAB/SvnRepository_Stromohab)

Where “S” is the drive letter mapped to [\\ElecFS\\StaffFS](#)
